

Cell Membrane Review
GENERAL BIOLOGY LABORATORY BSC 1005L

Note: The following learning objectives are meant to represent a general overview of the BSC1005L - and by no means are to be used as an all inclusive study guide. Requisites for this course include **all** assigned readings, handouts, written assignments, movies and lectures as well as any extra projects. Students are responsible for **all** the assigned materials regardless of whether or not said materials have been specifically covered or addressed during class. As always, students with questions regarding assignments, whether covered in class or not, are welcome to come to my office during office hours, or by appointment, or may e-mail me at: arodrigu@broward.edu their questions to me and I will respond in a timely manner. Upon successful completion of this unit, the students should be able to:

1. Contrast isotonic, hypertonic and hypotonic solutions.
2. What happened to the potato cells is placed in a hypotonic solution, a hypertonic solution?
3. Contrast solvent and solute.
4. What happens to red blood cells placed in isotonic, hypertonic and hypotonic solutions.
5. In your experiment of transport across a non living membrane what are the results?
6. What is diffusion?
7. Describe Brownian motion.
